SUMMARY

Data Analyst with 3+ years using SQL, Python, and Tableau to build models, dashboards, and data-quality workflows that drive decisions. Experienced in predictive modeling, A/B testing, and driver analysis, with hands-on work reaching 84% model precision across banking, operations, and client analytics.

SPECIALIZED SKILLS

• SQL • Python (Pandas, NumPy, Scikit-Learn) • Tableau • Power BI • Excel • Dashboarding • KPI Monitoring • Self-Serve Reporting • Google Analytics • A/B Testing • Hypothesis Testing • Regression Analysis • Classification • Decision Trees • Clustering • Forecasting • ETL Pipelines • Data Warehousing • Data Quality Monitoring • AWS • Databricks • Spark, Git/GitHub • Agile/Jira

EXPERIENCE

Data Analyst, Consulting, University of California, San Diego, CA 04/2025 - 06/2025

- Built models linking ~1,800 customer-survey responses and ~12,000 internal KPI records to Customer Allegiance Score, identifying order-to-ship time as the top driver of satisfaction to guide operational priorities.
- Tested four model types (XGBoost, logistic regression, random forest, neural network) and used permutation importance to narrow the full feature set to the 7-8 strongest drivers, reaching 84% precision in predicting satisfaction outcomes.
- Delivered findings through interactive Tableau dashboards and handed off the models to the client, who planned to extend them with internal teams for ongoing satisfaction tracking.

Data Analyst, University of California, San Diego, CA 05/2025 - Present

- Built reusable SQL and Python data-quality checks across 30,000+ banking records and 5+ source systems, applying duplicate detection, completeness rules, and variable standardization to flag and remove ~15% of records that would have corrupted downstream analysis.
- Developed a Python email-validation script to verify address legitimacy across all records, flagging invalid emails at ~70% precision to improve data reliability for downstream use.

Business Analyst, Quantiphi Analytics, Bangalore, India 07/2021 - 08/2023

- Scoped and pitched 100+ analytics and AI engagements to senior stakeholders across finance, media & entertainment, and healthcare clients, converting 10-20% into \$100K-250K opportunities.
- Ran discovery to translate ambiguous business needs into requirements, KPIs, and success criteria, building tailored proposals and demos that connected technical capability to measurable business value.
- Supported delivery of an adaptive e-learning recommendation engine (selecting each student's next question by difficulty from prior performance), performing data cleaning, duplicate detection, and field validation to prepare model-ready data.
- Partnered across Product, Engineering, and client teams through Agile delivery and AWS solution discussions, supporting the solution to 82% accuracy and adoption by real students.

PROJECTS

Credit Card Financial Dashboard | PostgreSQL, Power BI, DAX

- Built an interactive Power BI dashboard on PostgreSQL visualizing a credit-card portfolio of \$55M in revenue and \$45M in transaction volume, with KPIs for delinquency (6.06%) and activation (57%) to support risk monitoring.
- Modeled the PostgreSQL data layer and connected it to Power BI as a refreshable, SQL-backed pipeline, standardizing definitions for consistent, governed reporting rather than static output.

Intuit Next-Best-Offer Targeting | Python

- Built regression-based propensity models and automated Python/SQL pipelines to forecast upgrade likelihood across 75,000 small-business customers, generating prioritized target lists and a reusable KPI monitoring approach.
- Designed and analyzed A/B tests to validate lift and optimize targeting thresholds, translating results into a repeatable campaign strategy and ongoing monitoring that drove \$380K in incremental profit.

EDUCATION

University of California, San Diego, CA, Master of Science in Business Analytics (GPA: 3.8) 07/2024 - 12/2025

- Relevant Courses:** SQL, Fraud Analytics, Python, Business Analytics, Business Intelligence Systems, Customer Analytics, Marketing Analytics

Manipal Institute of Technology, Manipal, India, B.Tech in Mechanical Engineering (GPA: 3.62) 07/2017 - 08/2021
