

RISHIKUMAR MATHIAZHAGAN

www.linkedin.com/in/rishimathi | (858) 241-1288 | rishimathi@gmail.com

Data and analytics professional with 3+ years building reports, dashboards, and BI solutions that drive business decisions. Skilled in extracting financial and statistical data from multiple systems, modeling it, and translating it into accurate, timely reporting for both technical and business users. Experienced in partnering with stakeholders to assess reporting needs, building self-serve analytics, and training end users to get value from the tools.

SPECIALIZED SKILLS

- **Technical:** Python (Pandas, NumPy, Scikit-Learn), SQL, R, GenAI workflows (LangChain/OpenAI API), ETL, Databricks, AWS (S3, EC2), Git.
- **BI & Analytics:** Tableau, Power BI (DAX), Dashboard Design, Ad-hoc Reporting, Exception Reporting, KPI Monitoring, Self-Serve Analytics
- **Operations & AI:** AI-Enabled Automations, Gen AI Agents, Workflow Streamlining, Automated QA & Monitoring.
- **Data Engineering:** ETL Pipelines, Data Quality Management, Data Modeling, Data Integration, Automated Integrity Monitoring.

EXPERIENCE

Research Assistant, University of California, San Diego, CA 05/2025 - Present

- Eliminated manual QA and mitigated downstream reporting risk for 30,000+ records by deploying an AI-enabled Python monitoring system with real-time anomaly detection.
- Built repeatable, automated pipelines that replaced a manual error-prone process, so the data could be trusted without hands-on checking each cycle.

Business Consultant, Thermo Fisher (Capstone) 04/2025 - 06/2025

- Delivered self-serve analytics tools and dashboards (Tableau, SQL, Python) for cross-functional partners, and supported end users in accessing and interpreting reports, streamlining reporting and removing bottlenecks for a program involving ~14,000 records.
- Conducted operational deep dives and statistical analysis to isolate friction points, translating insights into prioritized operational changes to drive real-world process improvement.

Business Analyst - Delivery, Quantiphi Analytics, Bangalore, India 11/2022 - 08/2023

- Owned the full lifecycle of an automated Gen AI recommendation workflow, leading cross-functional delivery from concept through deployment on AWS, demonstrating strategic program ownership.
- Worked side-by-side with Product and Engineering through a Gen AI deployment, translating between technical teams and business stakeholders, sharpening the ability to position technical products credibly to engineers and data users.

Business Analyst - Presales, Quantiphi Analytics, Bangalore, India 07/2021 - 11/2022

- Ran discovery on inbound and outbound leads for custom AI solutions, qualifying technical requirements and positioning the solution to convert prospects into \$100K–\$250K opportunities and net-new partnerships.
- Conducted prospect research and synthesized pipeline data to prioritize high-potential accounts, then delivered tailored, personalized pitches that accelerated conversion from first conversation to qualified pipeline.
- Partnered with Sales Engineers and engineering teams during discovery to scope solutions for technical buyers, building fluency in how engineers and data users evaluate and adopt new products.

PROJECTS

Credit Card Financial Dashboard | SQL(PostgreSQL), Power BI, DAX

- Developed an interactive Power BI dashboard integrated with PostgreSQL to visualize \$55M in revenue and \$45M in transaction volume, optimizing risk monitoring by quantifying critical KPIs such as delinquency (6.06%) and card activation rates (57%).
- Engineered complex DAX measures to track Week-over-Week (WoW) performance, identifying a 28.8% revenue growth spike and a 93% transaction contribution from specific card segments (Blue & Silver).

Intuit QuickBooks Propensity Modeling | Python

- Built regression-based propensity models and automated Python pipelines to forecast upgrade likelihood across 75,000 small business customers; identified behavioral drivers and created a reusable KPI monitoring approach.
- Designed and analyzed A/B tests and conversion funnels to optimize user acquisition campaigns, informing targeting thresholds and improving ROAS to drive \$380K in incremental profit.
- Benchmarked a neural-network model to capture non-linear signals and incorporated the strongest insights into an interpretable solution to improve targeting quality and stakeholder trust.

Customer Churn Prediction | Python

- Built and compared churn models (Logistic Regression, Decision Trees, Neural Networks) on 39,000 customers, calibrating to a 2% base churn rate and selecting the best-performing approach based on holdout performance.
- Identified the top churn drivers via permutation importance and translated results into retention triggers and monitoring KPIs, then quantified impact with a 60-month CLV model prioritizing cohorts up to 4.17% churn vs. a 2% baseline.

EDUCATION

University of California, San Diego, CA, Master of Science in Business Analytics (GPA: 3.8) 12/2025

- **Relevant Courses:** SQL, Fraud Analytics, Python, Business Analytics, Business Intelligence Systems, Customer Analytics, Marketing Analytics

Manipal Institute of Technology, Manipal, India, B.Tech in Mechanical Engineering (GPA: 3.62) 08/2021

- **Relevant Courses:** Supply Chain & Logistics Management, Operations Management, Financial Management, C++
